

# Short Resume Dr. Ibrahim ALGHORAIBI

**Birth Date:** 01 January 1975

**Nationality:** Syrian

**Address:** Baramkeh, Damascus university

**Tel. N°:** (+963) 992678268 (mobile)

**E-mail:** [ibrahim.alghoraibi@gmail.com](mailto:ibrahim.alghoraibi@gmail.com)

ibrahim.alghoraibi@

**Key-Words:** Nano-Physics, Nano-biotechnology, Nanostructure, Epitaxy, III-V Nano-Semiconductors lasers, Nano-Optoelectronics, MBE growth & characterization, Laser ablation, Sol-Gel, Chemical bath deposition, dip coating, Nano-Electrochemistry, Electrospinning, Nanofibers, Polymer Nanocomposites, Quantum Dots, Quantum Wires, InAs/InP, porous silicon, CdS, PbS, PbSe, ZnS, CuInSe<sub>2</sub>, Solar Cells, silver (Ag) nanoparticles, RHEED, AFM, PL, UV-Vis, FTIR, EL, X-ray diffraction, XPS.

**Main field of study:** Nano-Surface physics, Thin Films and Nano Science & Nanotechnology.

## Education

**18 December 2008** PhD in Physics with Highest Distinction (**Highest honours**), [INSA](#), Rennes (France)

**9 September 2004** Master Degree in Physics (1<sup>st</sup> year) "Light and Matter Interaction", [Université de Rennes 1](#), France

**17 October 1999** Postgraduate studies diploma in Physics (1<sup>st</sup> year), "Electronic solids Physics", with Highest Distinction (*first graduate student*: mention **Excellent**), Aleppo University, syria

**27 September 1998** Bachelor (BSc) in science physics and chemistry with Highest distinction (*first graduate student*, mention **very good**), Aleppo University, syria

## Skills

### Research interests

#### Material Sciences:

\* **Growth:** Gaz and solid Source Molecular Beam Epitaxy (**MBE**), ultrahigh vacuum techniques, Magnetron Sputtering, Electrospinning, electrochemical deposition, Sol-Gel, Wet chemistry, pulse laser ablation, Dip coating

\* **Structural properties:** Atomic Force Microscopy (**AFM**), Scanning Electron Microscopy (**STM**), X-Ray Diffraction, Reflection High Energy Electron Diffraction (**RHEED**).

\* **Optical properties/Laser Technology:** Continuous-wave Photoluminescence (**CPL**), Photoluminescence Excitation Spectroscopy, UV-Vis Spectroscopy, FTIR Spectroscopy Electroluminescence (EL), Cryogenics (Liquid Helium & Nitrogen)- III-V laser heterostructure process - Clean room.

\* **Computer skills/Acquisition & data processing:** Windows' Office suite (Word, Excel, PowerPoint, Access, Flex PDE) Open Office, Windows, Internet, LaTeX English and Arabic, Photoshop CS, Network administration, Scientific Softwares (Nano softwares, Origin, Matlab, LabView, Crocodile Physics & Chemistry,...), Other services program .....

Dr. Ibrahim alghoraibi

\* **Communication/Languages:** Arabic: Mother language, French: Fluent, English: Intermediate (Special course of English for master degree: Aleppo University, Syria).

## Research interests:

- ❖ Nanomaterial, thin films deposition and characterization, Electrical, magnetic and optical properties of nano thin films, Industrial application of thin film coatings.
- ❖ Surface studies using different techniques like Auger , XPS electron spectroscopies, Low electron energy diffraction, Surface roughness study using Atomic force Microscopy and optical methods like UV, PL, EL....etc
- ❖ Study and fabrication of gas sensors based on metal oxides, porous silicon and carbon nanostructures and hybrids.
- ❖ Fabrication of solar cells based on CdS/CdTe , CuInSe<sub>2</sub>/CdS/ZnO
- ❖ Nano particles formation using pulse laser ablation and arc discharge method.
- ❖ Nanofibre formation using electrospinning technique
- ❖ Electrospun fibers and composites for tissue engineering applications, Micro-Ultra-Nano-RO-Filtration and Purification of water.
- ❖ Polymer fibers for multifunctional applications.
- ❖ Self-cleaning, superhydrophobic and superhydrophilic materials
- ❖ Quantum dots elaboration using Epitaxy.
- ❖ Sol-Gel, Wet chemistry and chemical bath (solution) deposition.
- ❖ Nano Material & Devices: Nanosensors, CNT.
- ❖ Synthesis of Nano-Silver Colloids (Metallic Nanoparticles)
- ❖ Application of Silver Nanoparticles and Nanofibers in Drinking Water Purification
- ❖ Application of nanotechnology in medical:
- ❖ Anti-Microbial, Anti-Bacterial and Anti-Fungal
- ❖ Dental Materials Scaffolds
- ❖ Scaffolds for teeth tissue engineering
- ❖ Nanostructure Scaffolds for tissue engineering
- ❖ Drug delivery
- ❖ Nano-biopolymeric fibers in wound healing
- ❖ Wound dressing

## Research projects

- \***2004-2007:** European network of excellence on Self-Assembled semiconductor Nanostructures for new Devices in photonics and Electronics (SANDiE)
- \***2004-2007:** European Network of Excellence on Photonic Integrated Components and Circuits (EPIXNET)
- \***2010-2017:** Fabrication and Characterization of Nanofibers by Electrospinning Technique, Department of Physics, University of Damascus.
- \***2010-2017:** Self-assembled InAs(Sb) quantum dots and quantum wires nanostructures, Department of Physics, University of Damascus.
- \***2010-2014:** Preparation and Characterization of Nanomaterial Films Amorphous Silicon For Solar Cells, Department of Physics, University of Damascus.
- \***2010-2014:** Preparation and Characterization of Nanocrystalline Silicon Thin Films for Solar Cell Applications, Department of Physics, University of Damascus.
- \***2016-2017:** Project of Biosynthesis of nano-silver and their anti-microbial effects, faculty of Pharmacy, Arab International University, syria

## Professional experience (Research-Projects and

- \* **October 2009 - December 2017**  
Doctor at the department of Physics, University of Damascus.
- \* **October 2004 - December 2008**  
PhD thesis: **Growth of InAs nanostructures on InP substrates for laser applications at 1,55  $\mu\text{m}$  in optical telecommunications**, [LENS Laboratory](#), INSA Rennes – France.  
Advisor: [Prof. N. Bertru](#) and [Prof. A. Le Corre](#)

Dr. Ibrahim alghoraibi

## Research Activities:

\* **February 2004-September 2004**

**Growth and characterisation of alloy AlInAs by Molecular Beam Epitaxy,** Laboratory [LENS Laboratory](#), INSA Rennes – France, Advisor: [Prof. N. Bertru](#)

\* **September 2001-September 2003**

Assistant Professor at the department of Physics, University of Damascus.

\* **September 1999-2001**

**Analytical Study of the ferrous-xylene orange-gelatin (FXG) gel dosimeter,** Department of Physics, Univ of Aleppo- Syria, Advisor: Prof. H. iskif and Prof A. Taleb.

## Professional experience (Teaching)

**1999-2001** Teaching in 1<sup>st</sup> year BSc of Practical Course in physics at University of Aleppo, Syria

**2005-2006** Part-time teaching at Institut National des Sciences Appliquées (INSA), France ~150 hours. Practical Course at BSc level (2<sup>nd</sup> year). Electricity, Electronics, Optics.

**2001-2003** Teaching assistance in 1<sup>st</sup> year BSc of Practical Course at University of Damascus, Syria, Electricity, Electronics, Optics, Thermodynamics, electromagnetism.

**2011-2012** Assistant Professor in 1<sup>st</sup> theoretical and Practical Course at University of Kalamon- Faculty of medicine, Syria/**General Physics 1&2 for dentist and pharmacy.**

**2012-2013** Assistant Professor in 1<sup>st</sup> theoretical and Practical Course at University of Rashid- Faculty of engineering, Syria/**General Physics 1&2 for Engineers**

**2014-2019** Assistant Professor in 1<sup>st</sup> theoretical Course at Arab International University- Faculty of pharmacy, Syria/**Medical Physics for pharmacy.**

**2009-2019** Assistant Professor in 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup> and 4<sup>rd</sup> year BSc of theoretical and Practical Course at University of Damascus, Syria /Optics, Electronics, Laser, Quantum physics, renewable energy, Basic physics courses & Laboratories, Modern Physics, Electronics Lab/.and Nanotechnology, Advanced physics, Thin films Nanostructure, research method for **Master course.**

## Research Activities:

- **Supervised** 5 PhD and 16 MSc
- **Published** more than 42 paper in international journal
- **Contributed** to more than 41 papers in international and national conference
- **Contributed** to more than 8 research projects
- **peer-reviewer:** Iranian Journal of Chemistry and Chemical Engineering(IJCCE), World Journal of Condensed Matter Physics , Journal for the Basic Sciences, Damascus University
- **Member in:**
  - ❖ Syrian Nanoscience & Technology Initiative Community (SNIC), head of unit Nanotechnology in department of physics, university of Damascus.  
<http://damascusuniversity.edu.sy/nano/home>
  - ❖ Syrian Society for Scientific Research (SSSR)/ <http://www.syssr.org>
  - ❖ Journal of Orthodontics & Endodontic, <http://orthodontics-endodontics.imedpub.com/editors.php>
- **Programme Committee Member/Organizer:** International Seminar on Nanomaterials in Energy and Environment (INMEE-2010) 21st-23rd September 2010, Damascus, Syria.
- **Participated in nanotechnology and materials conference** in Syria, France, Suiss, USA, Nottingham , spain, Germany, UK, Autriche, Turkey, Morocco, Pakistan, United Arab Emirates, Iraq and Egypt.

## Detailed PhD work and achievements

I started my PhD work at INSA Engineering School in Rennes (Brittany, in France) in year 2004.

The title of the PhD project can be translated “Growth of InAs nanostructures on InP substrates for laser applications at 1,55  $\mu\text{m}$  in optical telecommunications”

I joined here an abstract of the printed final version of my manuscript:

### Abstract:

In recent years, large interest has been devoted to quantum dot and quantum wire lasers. The main motivation of these research works is the expected improvements of the 1,55  $\mu\text{m}$  emitting laser performances. The work reported in this manuscript concerns InAs nanostructures grown on InP substrates by molecular beam epitaxy. Two types of lasers have been studied. They are based respectively on InAs/GaInAsP quantum dash formed on InP(100) and InAs/AlGaInAs quantum dots grown on InP(311)B substrates. After nanostructure formation studies and optimizations, quantum dashes based laser emitting at room temperature with threshold current density of 375 A/cm<sup>2</sup> have been achieved on InP (100) substrates. On (311)B substrates, QD lasers working up to 212 K have fabricated. In this laser, a large decrease of the threshold current from 110 to 140 K is observed. Complementary experiments show that the negative T<sub>0</sub> regime can be related to a delayed thermalisation of carriers within quantum dot ensemble.

### Achievements:

During this work I achieved all of the objectives that were set at the beginning of the contract, which were to develop a new understanding of the growth processes in the InAs/InP(001) quantum Wires system and allow a first laser emission at room temperature. By developing a great autonomy and at the same time learning how to work in a team, within the Epitaxy Group, I was able to conduct my research and address the technical difficulties of working in the epitaxy domain (MBE maintenance, Ultra-high vacuum techniques, calibrations...). Moreover I collaborated with other research teams at national and international level, for example in the framework of two European networks of Excellence (NoE [SANDIE](#) and [EPIXNET](#)). I have designed the epitaxy processes and grown personally more than hundred different samples. I have characterized them both by structural means (*in-situ* Reflection High Energy Diffraction: RHEED, and *ex-situ*: X-ray diffraction, Atomic Force Microscopy) and optical means (Photoluminescence spectroscopy, including use of Nitrogen and Helium cooling...). These lead to a better understanding of the InAs/InP system and allowed us to reach state-of-the-art results in our community. I have collaborated with other groups in the laboratory to design laser structure, have grown and measured them. The most striking result is the record low threshold current density laser that is a direct consequence of my growth optimizations and studies.

My work has lead to numerous publications in international journals (four as first author) and in international & national conferences. As it is the best way to judge the quality and proficiency of my work, I attached a list of my publications as a separate file.

## **Conferences Nationales & Workshops:**

75. **Ibrahim Alghoraibi**, Olivier Dehaese, Cyril Paranthoën, Nicolas Bertru, Philippe Caroff, Tony Rohel, Alain Le Corre, C. Cornet, H. Folliot and Slimane Loualiche. “InAs/InP QD Growth Towards Low Densities” *Workshops* à Lausanne, Suisse (orale) 14-16 Juin, (2005).
76. **Ibrahim Alghoraibi**, “Single-Photon emitters characterization facility”. *Workshops à Lausanne, Suisse (Research report)* 15-19 august, (2005).
77. **Ibrahim Alghoraibi**, Nicolas Bertru, Olivier Dehaese, Tony Rohel, Alain Le Corre. “Réalisation de boîtes quantiques pour l’application Laser: Le cas des boîtes quantiques InAs réalisés par épitaxie par jets moléculaires sur AlInAs”, in JNB1: 1<sup>ères</sup> Journées Nanosciences de Bretagne, Rennes, France, (2006).
78. N.Bertru, P.Caroff, A. Le Corre, **I.Alghoraibi**, O.Dehaese, “Les applications laser des boîtes quantiques, Le cas des lasers à boîtes quantiques InAs réalisés sur substrats InP (311)B” (orale), *JMC-10: Journées de la Matière Condensée*. Toulouse –France (2006)
79. N. Bertru, J. Ulloa, P. Koenraad, H. Folliot, A. Létoublon, W. Lu, **I. Alghoraibi**, A. Le Corre, J. Even, S.Loualiche, “Emission de boîtes quantiques au-delà de 1,55  $\mu\text{m}$ ”, *Orléan-France* (orale), 2008.
80. P. Caroff<sup>1</sup>, N. Bertu<sup>1</sup>, O. Dehaese<sup>1</sup>, A. Le Corre<sup>1</sup>, **I. Alghoraibi**<sup>1</sup>, E. Homeyer<sup>1</sup>, T. Rohel<sup>1</sup>, K. Tavernier, E. Macé A. Ponchet<sup>2</sup>. “Contrôle de la densité et de l’organisation verticale et latérale de boîtes quantiques InAs/InP(113)B, in *JNB1 (1ères Journées Nanosciences de Bretagne)*, Rennes, France, (2006).
81. F. Doré, A. Ballestar, C. Cornet, N. Bertru, O. Dehaese, **I. Alghoraibi**, R. Piron, J. Even, and S. Loualiche, “Structures à îlots quantiques sur substrat InP(100) pour l’émission dans le moyen infrarouge (2-5 microns)”, in *COLOQ 9 : Colloque sur les Lasers et l’Optique Quantique*, Dijon, France, 7 – 9 septembre (2005).
82. A. Letoublon, P. Caroff, N. Bertru, O. Dehaese, T. Rohel, A. Le Corre, **I. Alghoraibi**, A. Simon, C. Celebi, J.M. Ulloa, and P.M. Koenraad. “Boîtes quantiques InAs/InP(113)B pour l’émission à 1,55  $\mu\text{m}$ : contrôle de la croissance et caractérisation Structurale”, in *11ème JNMO: Journées Nano-Micro Electronique et Optoélectronique*. Aussois, France (2006).
83. G.Elias <sup>1</sup>, N. Bertu<sup>1</sup>, A. Le Corre<sup>1</sup>, **I. Alghoraibi**<sup>1</sup>, A. Nakkar<sup>1</sup>, N. Chevalier, H. Folliot, S. Loualiche. “Epitaxie des boîtes quantiques hautes performances InAs/InGaAsP/InP(100) pour des applications laser” in *JNB2: 2ème Journées Nanosciences de Bretagne*, Nantes, France, (2008).
84. Letoublon, P. Caroff, N. Bertru, O. Dehaese, T. Rohel, A. Le Corre, **I. Alghoraibi**, A. Simon, C. Celebi, J.M. Ulloa, and P.M. Koenraad, “Boîtes quantiques InAs/InP(113) pour l’émission à 1.55  $\mu\text{m}$ : contrôle de la croissance et caractérisation Structurale”, in *JNB1: 1ères Journées Nanosciences de Bretagne*, Rennes, France, (2006).
85. Letoublon, P. Caroff, N. Bertru, O. Dehaese, T. Rohel, A. Le Corre, **I. Alghoraibi**, A. Simon, C. Celebi, J.M. Ulloa, and P.M. Koenraad, “Boîtes quantiques InAs/InP(113) pour l’émission à 1.55  $\mu\text{m}$ : contrôle de la croissance et caractérisation Structurale”, in *11ème JNMO: Journées Nano-Micro Electronique et*

86. Lu W., **Alghoraibi I.**, Elias G., Nakkar A., Létoublon A., Rohel T., Folliot H., Bertru N., Le Corre A., Loualiche S. “[Transition fils boites dans le système InAs/InP \(100\)](#)” *Journées de la Société Française de métallurgie et matériaux (SF2M)*, France (2009).
